

DWA_9 Knowledge Check

What problems did you encounter converting the book preview to a component?

Having already converted the book preview into a factory function, converting this into a web component did not pose any major problems and only required some restructuring of already written logic.

What other elements make sense to convert into web components? Why?

The book preview overlay would be a good candidate for a web component, since it's comprised of a similar chunk of HTML for each book, only with differing book data.

Why does keeping your HTML, CSS and JavaScript in a single file sometimes make sense?

I think that keeping it all together helps to indicate which HTML elements, css styles and JS logic is relevant to (or specifically made for) this component, and only this component. It encapsulates the whole component well.
